COMMUNICATIONS

iCall Suite

PRODUCTIVITY THROUGH INTELLIGENCE

iCall Suite call management software

iCall Suite provides complete communications management that integrates with your telephone system. Users can view real-time and historical call data, see the status of other extensions and securely record all telephone calls.

Modules for every requirement

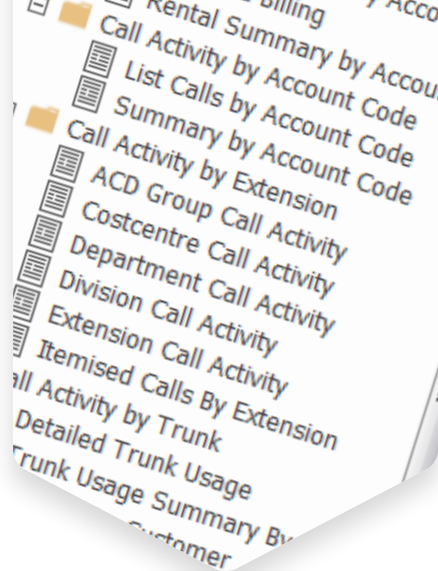

Available in fully integrated modules, iCall Suite provides all the business tools you need for your telephone system.

Special features for managing customer-facing teams*

iCall Suite has been designed to work using all available data outputs from your telephone system. iCall Suite can display real-time analytics such as unreturned missed call data and call answering performance via real-time dashboards using customisable widgets created from an extensive library of reports.

*Some contact centre features are telephone system dependent, please ask for details on your phone system.

Call Management

LOG AND ANALYSE YOUR COMMUNICATIONS

iCall Suite call management is ahead of the class

iCall Suite has an advantage over other call management or reporting suites, by using industry knowledge and intelligence to provide unparalleled levels of real-time and historical information.

You can only manage what you measure

iCall Suite is much more than simple call logging. It is a powerful database engine and a full suite of reports that are designed to give you accurate and useful analysis of your business communications.

Included are recognised metrics such as Grade of Service and Percentage Calls Answered reports as well as unreturned missed calls and department / DDI / user performance.

Reports Catalogue

Comprehensive reporting provides a clear view of your business communications. All reports can be customised using the powerful filtering engine.

Custom Filtering

Use the many in-built filters to customise reports and obtain exactly the data you require to measure and analyse your business.

Personal Profiles

Save personal profiles to re-run the reports you need at any time.

report

*Some features are telephone system dependent, please ask for details on your phone system.

Export Data

Export any report, and its underlying data, in PDF, Excel, CSV or HTML formats.

Graphical Analysis

The chart tab allows you to see report information in a clear graphical format.

Scheduled Reports

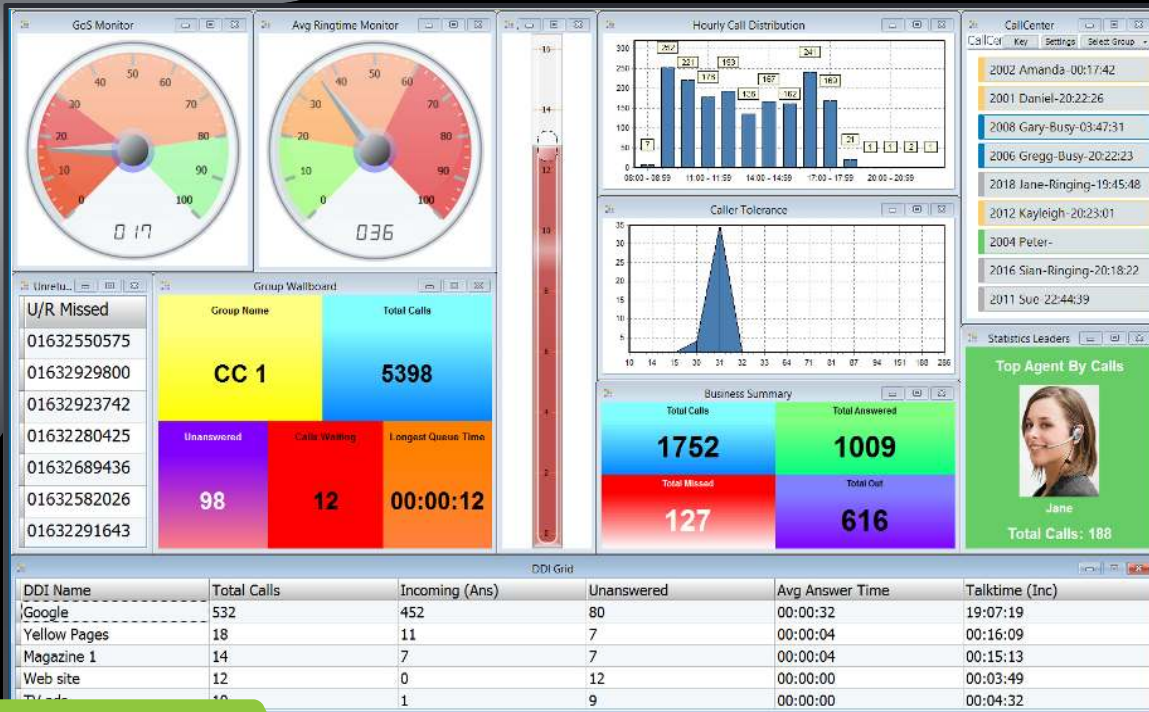

Scheduled reports can be sent to your email inbox on a daily, weekly or monthly basis – in a format that suits you.

**Understand
your business**

The background features a large, tilted image of a data table. A blue wavy line graphic curves across the table, starting from the right edge and ending near the bottom left. The table contains various data points, including numerical values and text labels.

Dashboard Displays

Average Ringtime Monitor

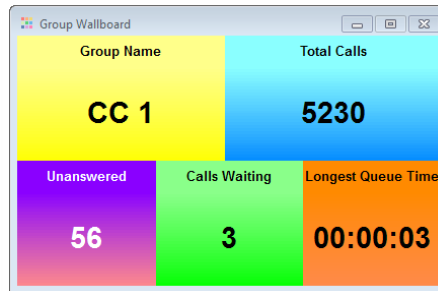

Real-time Monitors

Know up to the minute performance

iCall Suite constantly monitors the phone system for changes to extension status, calls in progress, calls in queue and many other factors. All events are captured and can be displayed on the dashboard in real-time.

You can also configure alarms and thresholds to visually alert you to significant status changes, as well as setting email alerts.

Custom Dashboards

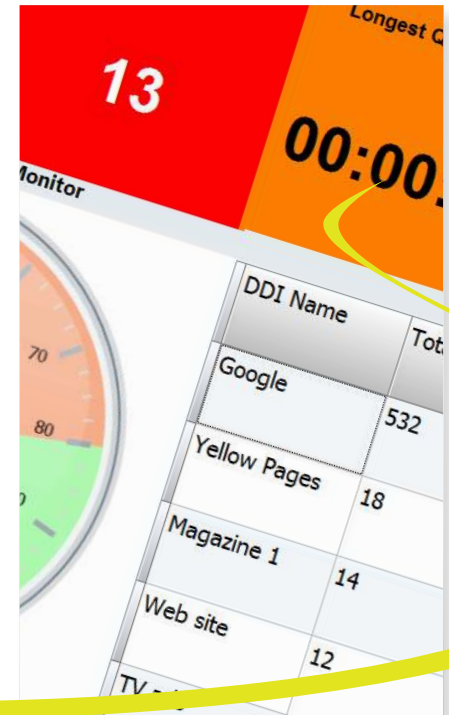

Create your own unique views

The iCall Suite dashboard is a blank canvas for you to make your own, with fully customisable widgets and data feeds.

Unique 'Widgets'

Filter and display data dynamically

Widgets are configurable 'mini reports' that you can place on the dashboard. Widgets display real-time or historical information in a clear graphical way using speedos,

thermometers, wallboards and charts. You can create your own widgets directly from reports and share them with other users.

Call Recording

KEEP A SECURE RECORD OF ALL CALLS

In today's competitive world, keeping a secure recording of telephone conversations just makes sense.

Many types of organisations can benefit from recording calls.

In particular, there are clear advantages for legal firms, insurance companies, call centres, public agencies, health centres, doctors surgeries and any FSA regulated company that is legally bound to record calls.

Call recording is vital for any organisation that is serious about monitoring staff performance and compliance to company guidelines.

iCall Suite call recording is completely integrated into the call management application, so you don't have to switch between applications to find or play back calls.

A choice of line types

We offer hardware for all line types including:

- Analogue
- ISDN2
- ISDN30
- SIP / IP Trunks

Contained and managed from a single work station or server, storing, finding, reviewing and archiving calls is just a click away.

Powerful Filters

Easily locate the calls you want

Finding the calls you want is easy with iCall Suite because we include a set of powerful filters to sort through all your recordings.

The screenshot shows the 'Call Recordings' filter interface. It is divided into several sections: 'Date' with a dropdown set to 'Today'; 'Time' with a range from '00:00:00' to '23:59:59'; 'User Settings' with a checkbox for 'Calls with playback permissions' and a 'Limit Call Recordings' field set to '1000'; 'Call Filters' with input fields for 'Extension', 'Number', and 'DDI', and a 'Min Call Duration' dropdown; 'Call Direction' with checkboxes for 'Outgoing' and 'Incoming'; 'Call Evaluation' with checkboxes for 'Evaluated' and 'Non-Evaluated'; and 'User Filters' with a 'Call Tag' dropdown and 'Flags' for 'Unflagged' (green) and 'Flagged' (red). At the bottom right are 'Search' and 'Save Search' buttons.

Simple Playback

Built in call player with export

The call player is used to listen to your encrypted call recordings from within the iCall Suite management application.

An export function allows you to decrypt and export recordings as .wav files for playback on other devices or for sharing via email.

Call Evaluation

Easily evaluate calls using your own call compliance questions and report on agent performance

The ability to proactively evaluate calls and staff is a useful tool in monitoring staff performance and compliance to call scripts. Calls can also be tagged for further review or for use in regular staff evaluation or training.

Personal Playlists

Create your own filtered playlists

Call recording playlists allow you to save your filter settings, which then provide fast access to exactly the calls you want to review at any time. You can create an unlimited number of playlists and share them with other iCall Suite users.

Contact Centre Analytics

MONITOR, MANAGE AND CONTROL YOUR CONTACT CENTRE

Real-time reporting for contact centres

Contact centre reporting provides up to the minute agent and group analytics. Up to 10 group performance parameters can be displayed in real-time for any group on a supervisors desktop or on large screens (wallboards) for all to view.

Contact centre modelling helps you to drive business efficiencies and achieve SLAs

You can review past performance and use “what if” calculations to forward plan the number of agents and times of day you want them to work. You can plan using different numbers of agents or different volumes of calls to ensure you are working with the optimum number of people. You can also change parameters such as wrap-up time to achieve SLAs.

Modules

CHOOSE WHAT SUITS YOU

iCall Suite is a comprehensive and fully integrated modular product. Select the right modules for your business based on your business needs.

Adding modules

You can add modules at any time to enhance the functionality of iCall Suite. Increased hardware specification may be required.

Please note that the contact centre feature set is telephone system dependent. Please ask for further details on your telephone system.

Demo Edition

If you want to evaluate iCall Suite you can download a demonstration edition which replicates a real system to show you what iCall Suite can do for your business. Please ask for further details.
